

MoSCoW Requirement Prioritization

Objective

To identify and prioritize the requirements of your assigned project using the MoSCoW Requirement Prioritization Technique.

Questions / Tasks

Q1. Identify 15-20 important requirements for your project.

The requirements should include a suitable combination of:

- Functional requirements
- Non-functional requirements
- User/stakeholder requirements
- System requirements

Write each requirement clearly and unambiguously.

Q2. Prioritize each requirement using the MoSCoW technique:

- M – Must Have: Essential requirement
- S – Should Have: Important but not essential
- C – Could Have: Desirable but optional
- W – Won't Have: Not included in the current version

Q3. Give a one-line justification for the priority assigned to each requirement.

Expected Output

Prepare the following table:

Req.	Requirement	Type	Priority	Justification
ID				
R1	User registration and login	Functional	Must Have	Required to access the system
R2	Search for available products	Functional	Must Have	Core functionality of the system
R3 Online payment facility Functional			Should Have	Important for completing purchases
			Have	

Could Improves user experience but

Product recommendation

R4

Functional

Have Won't Have

is optional

Voice-based product search

R5

Functional

Planned for a future version
