

AN INTELLIGENCE LAYER · ON TOP OF MERCHANT DATA

AI Merchant Daily Business & Refund Intelligence.

Paytm already helps merchants accept payments.

This adds the missing layer — one that **analyzes, verifies, explains,** and **delivers** the day's business insight to the merchant in their own language.

"Don't just show merchants their data.

Understand it for them."

TODAY · 14 SEP 2026

LIVE

COLLECTED TODAY

₹2,40,000

▲ 18% vs yesterday · 1000 orders

HOURLY VOLUME

FAILED +35% · 18-20h

AI

Failed payments rose **35%** between 18–20h — mostly on Product X.

Merchants receive data.

But do they understand it?

A small business on Paytm may process a thousand orders a day — and still open every morning asking the same six questions, by hand.

Q · 01
How much did I actually earn today?

Q · 02
Why did sales rise — or suddenly dip?

Q · 03
Why did failed payments just spike?

Q · 04
Which product is generating the most refunds?

Q · 05
Which refund requests look suspicious?

Q · 06
What actually needs my attention today?

ORDERS / DAY

Manual analysis

The problem isn't ~~lack of data~~. It's lack of actionable understanding.

From payment data to business intelligence — *the missing layer.*

Meet your AI merchant assistant.

One intelligence layer on top of the existing Paytm merchant data — quietly running three jobs on the merchant's behalf, every day.

CAPABILITY · 01

Business Intelligence

Reads every transaction, totals collection, finds patterns, and writes a one-line summary the merchant doesn't need to decode.

WHAT IT CALCULATES

Daily total

Peak hours

Day-over-day

Anomalies

“Sales rose 18%, but failed payments jumped 35% between 6–8 PM.”

READ · AGGREGATE · NARRATE

CAPABILITY · 02

Refund Intelligence

Cross-checks every refund — against the original, against previous refunds, against the pattern — and triages them into actionable buckets.

THREE TIERS

Verified

Review

Suspicious

Of 30 refund requests today, 25 verified, 3 need review, 2 suspicious.

VERIFY · TRIAGE · PRIORITIZE

CAPABILITY · 03

Multilingual WhatsApp

Delivers the daily summary and answers questions — on WhatsApp, in the merchant's preferred language, on a phone they already own.

DELIVERS

Daily summary

Q & A

Alerts

No dashboard hunting. No login. No English-only report — just a message.

PUSH · TRANSLATE · ANSWER

Turn 1,000 transactions into *one simple story*.

WHAT THE DAY LOOKED LIKE · RAW INPUT

WHAT THE AI CALCULATED · DERIVED METRICS

HOURLY TRANSACTIONS · 24H VIEW

AI INSIGHT · WHAT THE MERCHANT READS

AI · TODAY · ONE SUMMARY

Sales rose 18%, but failed payments jumped 35% between 18–20h — mostly on Product X (failed in 57% of the queue).

Refunds.

From manual checking to intelligent verification.

THE FLOW · SEVEN CHECKS PER REQUEST

- 01

STEP 01

Refund request arrives
- 02

STEP 02

Find the original transaction
- 03

STEP 03

Verify amount matches original
- 04

STEP 04

Confirm original payment status
- 05

STEP 05

Check prior refunds on the same order
- 06

STEP 06

Score against behavior patterns
- 07

STEP 07

AI risk classification

...and a risk score the merchant can see, in plain English.

ONE DAY · 30 REQUESTS, SORTED

Your business data. *In your language. On WhatsApp.*

DELIVERED IN MERCHANT'S PREFERRED LANGUAGE

+ MORE REGIONAL LANGUAGES ON THE ROADMAP

WHY THIS CHANGES THE EXPERIENCE

- Sent at the time the merchant wants
- Phone already in their pocket
- No login, no export, no learning curve

No dashboard hunting.

No complex reports. Just a message.

M

Merchant Assistant

व्यापार सहायक · online

TODAY · 09:00 AM

Daily business summary

आज का बिज़नेस सारांश

कुल बिक्री	₹2,40,000
कुल ऑर्डर	1,000
असफल भुगतान	30
रिफंड रिक्वेस्ट	30
बिक्री वृद्धि	▲ 18%

AI

रिफंड आज सामान्य से 40% अधिक रहे। अधिकांश Product X से संबंधित थे।

The merchant can *ask the AI anything.*

The same chat surface accepts questions in the merchant's own words — and answers them against the same data the summary came from.

not just a report.

YOU ASK “Aaj meri sales kaisi rahi?”	AI AI ANSWERS Aaj sales ₹2.4 lakh rahi — kal se 18% zyada.
YOU ASK “Sabse zyada refund kis product ka hua?”	AI AI ANSWERS Product X se 17 refund requests aayin — total refunds ka 57%.
YOU ASK “Kitne refunds suspicious hain?”	AI AI ANSWERS 2 requests duplicate ya suspicious pattern dikhati hain — review ke liye flagged.
YOU ASK · IN ENGLISH “Compare this week with last week.”	AI AI ANSWERS Revenue +12% week-on-week · refunds +18% · failure rate down 0.4 pts.

ALSO ANSWERS

- “Why were sales lower yesterday?”
- “When do I get the most payments?”
- “How many refunds need my attention right now?”

How it works.

A single pipeline. Every layer has one job. The merchant never sees anything but the last step.

FINAL STAGE

Merchant receives insight on WhatsApp.

FEEDBACK LOOP

Merchant question → AI engine → relevant slice of data → answer in their language.

CONTINUOUSLY

Every useful answer retrains the model. The system gets sharper every day.

Technical architecture.

Six layers, deliberately unsexy. Each does one job. LLM is one component, not the whole machine.

More than another dashboard.

Same data sits underneath — but the experience of acting on it changes shape.

◆ TRADITIONAL MERCHANT DASHBOARD	◆ AI MERCHANT ASSISTANT
Shows transaction data	Explains why it changed and what to do next
Merchant reads charts	AI identifies important trends automatically
List of refunds	Refund intelligence — verified, reviewed, suspicious
Merchant opens reports	AI sends a daily summary to the merchant
Dashboard-dependent	WhatsApp-accessible — on a phone they already own
Mostly reactive	Proactive alerts — before the merchant asks
One-language UI	Multilingual by default — the merchant's language

THE CENTRAL TRANSFORMATION

Impact on merchants.

Six **directional outcomes** — the merchant's day gets shorter, sharper, calmer.

● OUTCOME 01

Save time every morning

Daily analysis comes pre-done. The merchant stops compiling.

● OUTCOME 02

Reduce refund leakage

Duplicates, suspicious patterns, inconsistent amounts — surfaced, not paid out silently.

● OUTCOME 03

Better decisions, faster

The merchant sees what changed — not a wall of raw numbers to interpret.

● OUTCOME 04

Faster awareness

Spikes, failures, anomalies — flagged in near-real time, not at month-end.

● OUTCOME 05

Greater accessibility

Delivered where the merchant already is — WhatsApp, in their language.

● OUTCOME 06

Better merchant experience

Paytm data stops being a chore to look at — it becomes something useful that arrives.

Less manual work + **better visibility** + **faster decisions**

= smarter merchant operations, every day.

Where this can *go next*.

Extensions beyond the MVP — the natural next moves once the intelligence layer is trusted.

FUTURE EXTENSIONS · NOT MVP

FORECASTING

Predictive sales forecast

Tomorrow, next week, the upcoming festival.

CASH

Cash-flow forecasting

When money lands in the account, week over week.

INVENTORY

Smart stock suggestions

What to reorder, what to pause, before it runs out.

CUSTOMER

Customer behavior insight

Who comes back, who churns, who spikes spend.

PROFITABILITY

Product-level margin lens

Which products earn after refunds, fees, effort.

ANOMALY

Automatic unusual-day alerts

SMS + WhatsApp the moment a pattern breaks.

SEASONAL

Festival-aware planning

Diwali weekends, cricket finals, school re-openings.

VOICE

Voice assistant

Ask by speaking — in the merchant's own tongue.

EXAMPLE

One future alert, this Sunday at 7 AM:

“Your weekend sales are expected to rise *~20%*. Consider increasing inventory of *Product X* by Friday.”

FROM STATS · TO RECOMMENDATION

EVOLVES TO *advice*

ALSO PLANNED

- + Personalized recommendations
- + More regional languages
- + AI-suggested business actions
- + Merchant-side personalization

From payments *to intelligence.*

AI MERCHANT

Daily Business
& Refund
Intelligence

as AI Layer

“Paytm already helps merchants accept payments.” We want to help them understand what those payments mean.

THE FOUR JOBS THE SYSTEM DOES

VERB 01

Analyze.

read the day, sum it up

VERB 02

Verify.

check every refund

VERB 03

Explain.

in plain, tradable words

VERB 04

Communicate.

on WhatsApp, in their tongue

“Don't just show merchants their data. Understand it for them.”
